

## **VEHICLE SERVICE BODY**

### **ABSTRACT OF THE DISCLOSURE**

A service body for a vehicle includes side packs, each of which is formed with a multi-panel face which includes a side panel, a front panel and a back panel. The panels of the multi-panel face are formed integral by laser cutting the face from a single sheet of metal. L-shaped compartment panels are constructed by forming a compartment divider at right angles to a recessed doorjamb. The recessed doorjams are welded to the interior surface of the side panel. Top, back and bottom panels are welded to flanged edges of the multi-panel face.
